The following are some of research and projects you may be interested in:

Year	Organisation	Theme	Name of Study/Research	Key Description	Link
				2023	
2023	RAND Organisation	Financial Stability of UK Military Families	Examining the financial stability of UK military families	findings and recommendations for policy and practice from a study looking at the prevalence and drivers of financial (in)stability among military families in the United Kingdom.	https://www.rand.org/randeurope/research/projects/2023/uk-military-families-financial-stability.html
2023	Military and Emergency Services Health Australia		National Framework for vital postvention support	with the aim to complete it by mid 2024.	A national first to help families and co-workers - Military and Emergency Services Health Australia (MESHA)
2023	Military and Emergency Services Health Australia		Stress-response and metabolic systems in children living in military and first responder families: Potential for targets for individualising exercise treatment of anxiety?	week exercise intervention to improve these mechanisms and assist in the treatment of youth anxiety in military and first-responder families.	https://mesha.org.au/research-publications/stress-response-and-metabolic-systems-in-children-living-in-military-and-first-responder- families-potential-targets-for-individualising-exercise-treatment-of-anxiety/
2023	Australia Institute of Family Studies	Health of Veterans' Families	Strengthening and protecting veteran family relationships	The Australian Institute of Family Studies (AIFS) is conducting this research with the Department of Veterans' Affairs who funded and sponsored the study, supported by the Department of Defence. Strengthening and Protecting Veteran Family Relationships is a research study looking at programs or services that aim to strengthen couple relationships where one (or both) partners are current or ex-serving Australian Defence Force members.	Strengthening and protecting veteran family relationships   Australian Institute of Family Studies (aifs.gov.au)
2023	Australian Institute of Health and Welfare	Health of Veterans	Health of Veterans Report	Veterans – permanent, reserve and ex-serving members of the Australian Defence Force (ADF) – and their families are an important population group for health and welfare monitoring. The unique nature of ADF service promotes protective factors that can lead to improved health outcomes but also exposes members to risk factors that may lead to poor health during and after their military service.	https://www.aihw.gov.au/reports/veterans/health-of-veterans/contents/summary
2023	Military and Emergency Services Health Australia	Health of Veterans	Gambling problems predict suicidality in recently transitioned military veterans	This study investigated associations between gambling problems and suicidality in Australian veterans.	https://mesha.org.au/research-publications/gambling-problems-predict-suicidality-in-recently-transitioned-military-veterans/
2023	Gallipoli Medical Research Foundation	Health of Veterans	Post Traumatic Sleep Disturbances in Veterans: A Pilot Randomized Control Trial of Cognitive Behavioural Therapy for Insomnia and Imagery Rehearsal Therapy	Posttraumatic stress disorder (PTSD) is associated with sleep disturbances including insomnia and nightmares. This study compared cognitive behavioural therapy for insomnia (CBT-I) with CBT-I combined with imagery rehearsal therapy (IRT) for nightmares to evaluate if the combined treatment led to greater reductions in trauma-related sleep disturbances in Australian veterans.	https://www.gallipoliresearch.com.au/2023/07/03/study-highlights-effective-treatment-for-sleep-disturbances-in-veterans/
2023	Phoenix Australia	Intimate Partner Violence (IPV)	Intimate Partner Violence among current and ex- serving Australian Defence Force personnel and families: Transition and Wellbeing Research Programme Data Analyses Project	DVA has commissioned Phoenix Australia – Centre for Posttraumatic Mental Health to examine the rates of intimate partner violence among current- and ex-serving ADF personnel, using data from a large-scale study of current and recently transitioned ADF personnel and their families. Project findings will be publicly available in mid 2023	https://www.openarms.gov.au/about/health-professionals/research-and-collaboration/intimate-partner-violence-among-current-and- ex-serving-adf-personnel-and-families
	2022				
2022	Australian Institute of Family Studies	Health of Veterans' Families	Australian Military & Veteran Families Study	The Australian Military and Veteran Families Study sought to understand family experiences of military life, how these shaped continued service in the Australian Defence Force (ADF) and how families' transition from service can be improved.	https://aifs.gov.au/projects/defence-veteran-family-research/australian-military-and-veteran-families-study
2022	Military and Emergency Services Health Australia		Families' experiences of supporting Australian veterans to seek help for a mental health problem: a linked data analysis of national surveys with families and veterans		https://mesha.org.au/research-publications/families-experiences-of-supporting-australian-veterans-to-seek-help-for-a-mental-health- problem-a-linked-data-analysis-of-national-surveys-with-families-and-veterans/
2022	Phoenix Australia	Health of Veterans	Moral Injury Outcome Scale Project	Moral injury refers to witnessing or experiencing acts that conflict with your deeply held moral beliefs, values and expectations. This study aims to develop a tool to measure moral injury that military care providers can use to better identify and support Defence members impacted by these experiences.	https://www.phoenixaustralia.org/research-projects/moral-injury-outcome-scale-project/

A thematic analysis of secondary data was conducted to explore the organisational and social drivers that influence IPV occurrences by ADF personnel, and how the ADF enforce its zero tolerance policy on domestic violence perpetration. Results revealed the ADF and Department of Veteran Affairs made no statements regarding IPV as a problem for military personnel, despite this study indicating this population are at a greater risk of perpetration. The ADF attributed IPV causation to 'abnormal' individuals or situations. This ignores the culture of hyper masculine masculinity and emphasis on operational effectiveness that was enforced during ADF training and emerged as a continuous theme throughout the results. Deployment is considered a challenging time for military families that lasts three to nine months for Australian Defence Force (ADF) personnel. There is insufficient research about children who experience parental deployment (Siebler, 2015). This recommendations report highlights valuable insights into young children's understandings and experiences of their parents' military deployment in Australia. Social support, particularly support from an intimate partner, is both a significant protective factor for trauma-exposed Veterans and critical for recovery in mental health, yet we know little about the experiences and support needs of their partners, particularly in the Australian context. This study examined the multidimensional nature of experiences of being an intimate partner of a contemporary Veteran with posttraumatic terses disorder (PTSD). Families often feel disconnected from the Defence Force, DVA or emergency agencies might be providing.
