

Attachment 7 - Heritage Portico Measurements for Reconstruction

This attachment shows the detailed photos of the portico construction with measurement annotations to facilitate the accurate reconstruction of the portico by the BCC as an interpretive element in the proposed community park.

Additionally the entrance gate measurements have also been recorded. This is not strictly necessary given they were retained *in situ* and remain protected by plywood hoarding, but has been included as a simple risk management mitigation against the possibility of some sort of damage to the gates outside of this action.

This document has been sent to BCC for their records.
